Request for Proposals for Bluetooth Radio Cyber Range (BRaCR) Wall

ADDENDUM #3

Please mark all proposal submission Envelopes with the following information

Sealed RFP # L192015
Due on May 12, 2020 no later than 2:00 PM, MST
The following questions were received by the Technical Questions/Inquiries due date of May 4, 2020 at 12:00PM MST:

1. We understand this section to mean that if UofA likes our proposed solution/ideas but decides for any reason not to use us as their provider that our solution/ideas may be used at UofA's discretion. Which could include giving the solution/ideas to another bidder or including them in a future RFP. Is this a correct understanding?

   As per section 3.8.6 proprietary information may be kept confidential though those sections would need to be marked as such. The entire RFP cannot be marked as confidential if the University disagrees with any section marked confidential you will be notified prior to the release of your RFP to the committee for review. Additionally, the University is subject to Public Records requests but will not speculate on who will request to see those submissions or future RFP’s.

2. This is a very niche proposal; it is unlikely that a bidder has completed three comparable projects for similar institutions. Would our proposal be disregarded or ruled incompliant by not providing references for three previous projects that were demonstrably similar?

   References are waived for this RFP.

3. What does the timeline look like as we move forward from award to delivery?

   Please refer to section 5.2 of the RFP.

4. When is it expected to be awarded?

   We would expect to award sometime in May.

5. Regarding the breakdown size, how set in stone is this? Specialized mount points or tie downs. Any fit requirements?

   We don't have specific mount points or latch components. Our current intent is to not break it down often. We don't want to see seams and we don't want it to break when we do break it down. Take whatever care is needed for break down and set up; and it needs to be stable when put together.

6. Regarding the bluetooth keyboard and mouse; is the intention is to hang or a pocket for this? Do you want to be able to type on it or to have it on a table?

   The mouse and keyboard need to be mobile and a pocket is acceptable so long as the devices were not tethered.

End of addendum, all else remains the same.
